Professional Summary

Australian citizen and final-year Monash IT and Business student (GPA 3.70/4.0, WAM 82.1), graduating November 2026 and available full-time from December. Currently Team Lead and sole client liaison for a six-person cross-functional team building and deploying a full-stack web application for a live commercial client, following three months as a Business Analyst intern turning stakeholder requirements into Power BI dashboards and automated data processes. Pairs hands-on delivery — a production full-stack application and two High Distinction mobile apps — with the requirements, stakeholder and documentation work that surrounds it. Seeking a graduate program in software engineering, solution delivery or business analysis.

Education

Monash University — Bachelor of IT and Business

Expected Nov 2026

Double degree | Majors: Software Development & Business Analytics | GPA 3.70/4.0 | WAM 82.1

- High Distinction coursework: Mobile Application Development, iOS Development, Web Database Interfaces, Object-Oriented Programming. Industry Capstone and Software Security in progress.

Professional Experience

Team Lead, Client Liaison & Developer — Industry Capstone

Aug 2026 – Present

Monash University | Client: Agencia Change (change management consultancy) | Melbourne, VIC

- Lead a six-person cross-functional agile team (2 developers, 2 cyber security, 2 business analysts) delivering a full-stack web application to a live commercial client — running sprint planning, stand-ups, reviews and retrospectives, and sequencing the security and analysis workstreams into the development plan.
- Act as sole client liaison: run requirements and demonstration sessions with the client, translate business needs into a prioritised backlog with clear acceptance criteria, and renegotiate scope with the client when constraints shift.
- Build the application as one of two developers in CakePHP over a MySQL database (phpMyAdmin), deployed to production on VentraIP cPanel hosting.
- Implemented form version control — session-scoped operation logging, snapshotting and version restore — so client staff can recover any earlier state of a form rather than losing work to an overwrite.
- Implemented real-time collaborative editing using Yjs (CRDT) over WebSocket, allowing multiple client users to edit the same form simultaneously without conflicts or lock contention.
- Own the technical documentation and handover pack so the client can operate and extend the product once the engagement ends.

Junior Business Analyst Intern — St Vincent de Paul Society

Mar 2026 – May 2026

Box Hill, VIC

- Ran requirements-gathering sessions with cross-functional stakeholders (Treasury, Philanthropy, Fundraising) and built the resulting Power BI dashboards over Microsoft Dynamics data, retiring a manual extract-clean-visualise cycle of 1–2 hours per reporting round.
- Delivered beyond the original brief: the Fundraising team adopted the dashboards for weekly catch-ups, removing duplicate reporting effort across two teams.
- Identified an unscoped data-integrity problem and built a reusable Power Query fuzzy-matching pipeline across ~30,000 donor records, validated at 100% precision on a random 100-record audit sample.
- Replaced a manual identification process of 1+ business day per pass with automated flagging, documenting the logic for reuse while recommending human review for final merge decisions on sensitive donor data.

Retail Sales Associate — Vodafone

Dec 2024 – Apr 2025

Doncaster East, VIC

- Diagnosed and resolved iOS/Android hardware, network and account issues at first contact during high-volume shifts, reducing escalations to technical specialists.
- Managed customer data and contract logistics across the full sales lifecycle; store ranked top 5 for customer satisfaction across Melbourne's eastern region.

Crew Member — McDonald's, Doncaster East VIC

Dec 2022 – Jul 2023

- High-volume team operations under time pressure, worked alongside full-time study — punctuality, handover discipline and shift ownership.

Leadership & Volunteering

Student Ambassador — Monash University Open Day
Aug 2026

Clayton, VIC

- Represented the University to prospective students and families at Open Day — guiding guests around campus and fielding unscripted questions on course structure, majors and pathways across the IT and Business degrees, adapting the same information for school leavers, parents and international families.

Technical Projects

ProBudget — Production Full-Stack Financial Application
Next.js 15, React, TypeScript, Tailwind CSS, PostgreSQL (Neon), Vercel

- Architected, built and deployed a live application (pro-budget.vercel.app) that lets users manage recurring subscriptions and visualise budget trends in a responsive, dark-mode UI.
- Designed the PostgreSQL schema and indexing strategy for efficient transaction retrieval as data volume grows; migrating the database to Microsoft Azure to apply my DP-900 certification in practice.

MyMichlin — iOS Restaurant Discovery App
Swift, UIKit, MVC, MapKit, Google Maps SDK, Google Places API, Gemini API

- Built an AI-powered recommendation engine on the Google Gemini API, integrating Google Maps SDK, Places API and MapKit via async Swift for live restaurant data and custom map annotations.
- Graded 95% (High Distinction) for UI design, code quality and technical implementation.

Nutrition Tracking App — Android
Kotlin, Jetpack Compose, Room Database, Gemini API, MVVM, Figma

- Delivered a Gemini-powered dietary analysis feature with offline-first Room Database persistence, and designed a Material Design UI in Figma scoped through simulated client requirement-gathering sessions.
- Graded High Distinction for functionality, structure and adherence to clean MVVM architecture.

Technical Skills & Certification

Certification: Microsoft Certified: Azure Data Fundamentals (DP-900)

Delivery & analysis: Agile/Scrum (sprint planning, stand-ups, retrospectives), requirements gathering, stakeholder engagement, backlog and acceptance criteria, process mapping, technical documentation, Lucidchart, Figma

Languages: TypeScript, JavaScript, Python, Kotlin, Swift, Java, PHP, SQL

Web & real-time: Next.js 15, React, Tailwind, CakePHP (MVC), Yjs (CRDT), WebSocket, REST, cPanel deployment, Git, Vercel, Netlify

Mobile: Jetpack Compose, Android SDK, Room, UIKit, MVVM

Data & BI: PostgreSQL, MySQL/phpMyAdmin, Power BI, Power Query (M), DAX, Microsoft Dynamics, Azure

Spoken languages: English and Mandarin (fluent, bilingual)

Referees: Available on request
